

J6B - Multimedia Cockpit - Actros 5

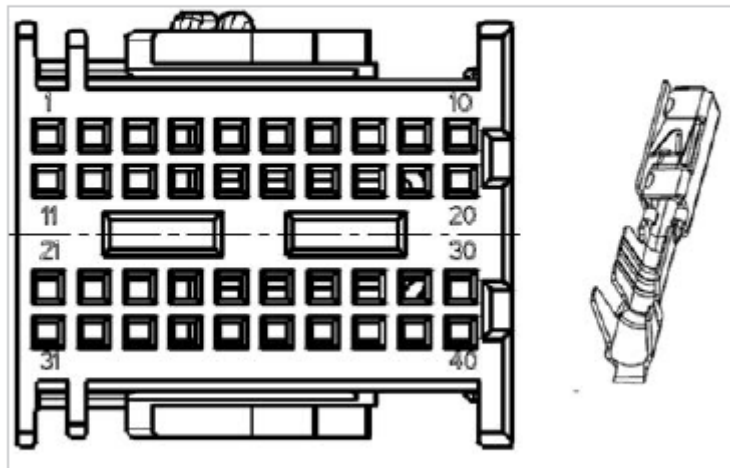

8.2.7 Pre-installation and display for up to four cameras (sales code J9P)

The J9P equipment integrates a display wired into the cab/chassis interface for up to four video cameras. When reverse gear is engaged, camera 1 is automatically activated.

In the secondary display, up to four preview images are possible in real time. The number of cameras must be parameterized in the Connect 5 control unit (ICC5) with XENTRY Diagnosis so that the display is adapted to this number.

The following table shows the available pins in plug X43 for connecting the corresponding cameras:

Camera	Video in	Shield	Shield	GND
1	4	14	10	20
2	13	3	9	19
3	2	12	8	18
4	11	1	7	17
